

Hamro Hospital

Final Verification Report

1. Verification Summary

Patient registration, OPD, barcode lookup, doctor accounts, referrals, ServiceOrder engine, PaymentEvent, PatientTimeline, billing, pending payments, eSewa foundation, laboratory, radiology, pharmacy, admission, nursing, OT, blood bank, insurance, finance, reports, staff attendance, leave, payroll, salary slips, WebSocket foundation, Celery foundation, production readiness, extension services and documentation.

Area	Result
Django system check	Passed
Migrations	Passed
Workflow tests	Passed
Core dashboards	Spot-checked
Reports PDF/Excel	Spot-checked
Extension services	Spot-checked
Staff attendance/payroll	Spot-checked
Production config command	Available

2. Modules Verified

3. Permission Review

Role	Access summary
Super Admin	Full system and reports
Finance	Payroll, attendance, finance, revenue, billing records
Department Head	Own department staff/referrals/orders/revenue
Doctor	Patient view, consultations, referrals, own profile
Clinical departments	Own queue, reports, service orders
Patient	Own portal records and bills

4. Bugs and Issues Fixed

Dashboard URL reversal, admin save errors, patient required fields, QR/barcode lookup, OPD phone missing, print barcode gaps, doctor linking, referral billing, pending payments, payroll access, department head scoping, leave override policy, report exports, extension service workflow.

5. Remaining Limitations

Live production requires real REDIS_URL, Celery worker/beat, live eSewa credentials, PostgreSQL credentials, and fingerprint device SDK/API. Code paths and local fallback workflows are included.

6. Recommendations

Use PostgreSQL in production, Redis for Channels/Celery, automate backups, connect biometric device bridge, complete real eSewa UAT, gradually migrate every print document to standard_receipt include, add more end-to-end Selenium tests.
