

Hamro Hospital Backup and Restore Guide

Backup Types

- Database Backup creates JSON dump using backup_data.
- Media Backup creates ZIP of uploaded photos/documents/reports using backup_media.
- Full Backup creates one ZIP with database.json and media files using backup_full.
- Super Admin dashboard supports manual backup, download, history and confirmed database restore.

Scheduled Backup

- Use cron, Windows Task Scheduler, or Celery Beat to run python manage.py backup_full daily.
- Sync backups folder to secure cloud storage/NAS after creation.
- Keep at least daily backups for 30 days and monthly backups for one year.

Restore

- Restore database JSON from the Super Admin backup center only after typing RESTORE.
- For full ZIP restore, extract database.json and restore with python manage.py restore_data database.json --yes.
- Restore media/ into MEDIA_ROOT after verifying ZIP integrity.
- Always test restore in staging before restoring production.

Security

- Backup files contain confidential hospital data.
- Encrypt cloud backup storage.
- Restrict backup dashboard to Main Super Admin.
- Record restore events in audit log.
