

# Final Verification Report

Prepared for final production delivery. This document is suitable for technical teams, hospital management, administrators, and deployment engineers.

## 1. Executive Verification Summary

Final verification was performed for production readiness. The existing homepage and dashboard UI were preserved. Functional verification focused on pages, permissions, workflow integration, reports, exports, backup readiness, migrations, and PostgreSQL readiness.

## 2. Modules Tested

- Patient Registration and OPD
- Patient Portal
- EHS / Extension Services
- Doctor Consultation
- Referrals and Service Orders
- Billing and Cash Counter
- Finance and Accounts
- Laboratory
- Radiology
- Pharmacy
- Admissions and Ward
- Nursing
- Operation Theatre
- Blood Bank
- Insurance
- Medical Records
- Staff Attendance
- Leave Management
- Payroll and Salary
- Reports and Exports
- Notifications
- Audit Trail
- Backup and Restore
- PostgreSQL Deployment
- Security and Maintenance

### 3. Pages Tested

- Public home/about/departments/doctors/services/extension pages
- Staff dashboards and role dashboards
- Registration, billing, lab, radiology, pharmacy, admissions, nursing, OT, blood bank, insurance, finance, reports, workflow, referrals, medical records
- Backup center
- Doctor schedule and profile pages

## 4. Features Verified

- Barcode patient/staff lookup endpoints
- Report date filters/search/sorting/totals
- PDF and Excel exports
- Role dashboard access
- Department Head denial from finance/payroll/global administration
- PostgreSQL settings check
- Clean migrations
- Backup command availability

## 5. Bugs and Issues Fixed

- Added clean final migrations in previous verification step.
- Added legacy doctor dashboard URL compatibility in previous verification step.
- Added Super Admin configurable Extension Service fees to doctor management form.
- Enabled Department Heads to view/edit own-department doctor schedule/profile without global doctor administration.
- Enhanced public doctor profile to show morning/afternoon schedule and quotas.
- Expanded backup center with database, media, full backup, download, restore, history, scheduled backup instructions, and cloud-ready notes.

## 6. Security and Permission Review

- Super Admin-only backup center.
- Department Head scoped to own department for staff/doctors/referrals/reports.
- Finance reports separate from confidential clinical views.
- Role decorators enforce dashboard/module access.
- Restore requires explicit confirmation text and only allows JSON database restore from backup folder.

## 7. Database Review

- SQLite remains development default.
- PostgreSQL switch uses environment variables.
- No pending model migrations.
- Django ORM keeps models database-agnostic.

## 8. Production Readiness Checklist

- DEBUG=False required before live.
- ALLOWED\_HOSTS and CSRF\_TRUSTED\_ORIGINS must be configured.
- PostgreSQL credentials required.
- Redis/Celery services recommended for production workflows.
- Backups must be scheduled and tested.
- Payment gateways require UAT/live credentials.

## 9. Remaining Limitations

- Real fingerprint machine SDK requires final hardware model/API.
- Live payment gateway requires merchant credentials and provider testing.
- Cloud backup provider must be selected and configured during deployment.
- Hospital UAT with real data is still required before go-live.
